## Office Action Summary

Application No.

09/683,595

Applicant(s)

SOWERWINE, JIM

Examiner

Alvin A. Hunter

Art Unit

3711

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

### Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

### Status

- 1) ☒ Responsive to communication(s) filed on 29 March 2004.
- 2a) ☐ This action is FINAL. 2b) ☒ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

### Disposition of Claims

- 4) ☒ Claim(s) 14-21 is/are pending in the application.
- 4a) Of the above claim(s) \_\_\_\_\_ is/are withdrawn from consideration.
- 5) ☐ Claim(s) \_\_\_\_\_ is/are allowed.
- 6) ☒ Claim(s) 14-21 is/are rejected.
- 7) ☐ Claim(s) \_\_\_\_\_ is/are objected to.
- 8) ☐ Claim(s) \_\_\_\_\_ are subject to restriction and/or election requirement.

### Application Papers

- 9) ☐ The specification is objected to by the Examiner.
- 10) ☐ The drawing(s) filed on \_\_\_\_\_ is/are: a) ☐ accepted or b) ☐ objected to by the Examiner.  
Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).  
Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
- 11) ☐ The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

### Priority under 35 U.S.C. § 119

- 12) ☐ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
- a) ☐ All b) ☐ Some \* c) ☐ None of:
- ☐ Certified copies of the priority documents have been received.
  - ☐ Certified copies of the priority documents have been received in Application No. \_\_\_\_\_.
  - ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).

\* See the attached detailed Office action for a list of the certified copies not received.

## **DETAILED ACTION**

### ***Claim Rejections - 35 USC § 112***

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Claim 15 is rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Claim 15 depends from claim 1 which is a cancelled claimed. For examination purposes, claim 15 will be treated as if it depended from claim 14.

### ***Claim Rejections - 35 USC § 103***

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

1. Claims 14 and 16 are rejected under 35 U.S.C. 103(a) as being unpatentable over Marier, Jr. (USPN 5375833) in view of Wateska et al. (USPN 5860874).

Marier, Jr. discloses a golf practice device for assisting in developing a proper swing (See Summary of the invention). The device comprises an elevated path guidance means (12), vertical column (18), support (14), base (16), and support arm (20) (See Entire Document). The elevated path guide means are two cylindrical rods in which separate from the device upon impact of a club and it is noted that the elevated path guide means may also be one continuous rod (See Column 2, lines 23 through

Art Unit: 3711

59). The elevated guide means, in which provides a reference in which the swing should correctly arc, is connected to the vertical column by means of the support arm via T-joint, or what the applicant calls a cradle interface (See Summary of the Invention and Column 2, lines 23 through 37). It is noted that various fasteners and clamps may be used on the support arm for holding the rods (See Column 2, lines 56 though 59). Though Marier, Jr. prefers the elevated path guide means to extend in two directions, would achieve the same result with one rod extending in one direction and would be obvious to omitted a rod in order to reduce the arc swing zone of the user (See In re Larson 144 USPQ 347). It is also clearly apparent that the rods can be reversibly engaged. Furthermore, Marier, Jr. discloses the support arm being pivotable only to allow the user to align the device with target as desired. The device can and is capable of being align in a parallel relation to the line if desired by the user. Marier, Jr. does not disclose having a cushioning material on the guide means. Wateska et al. discloses a golf swing training device in which a resilient terminal sleeve (44) attached and covering a predetermined extent of the distal end of the second leg (40B) (See Column 3, lines 37 through 50). It is apparent that because Wateska et al. discloses that the device can be use repeatedly, and the sleeve is resilient, that the sleeve is inherently a cushioning material. One having ordinary skill in the art would have found it obvious to incorporate a cushioning means, as taught by Watesha et al. to provide repeated use of the device.

2. Claims 15 and 17 are rejected under 35 U.S.C. 103(a) as being unpatentable over the prior art, as applied to claim 14 above, in view of Macri (USPN 3554555) and admitted prior art.

Art Unit: 3711

The prior art, as applied to claim 14 above, does not disclose an elevated path guide means made of polyethylene or an elevated guide means engaged to a cradle interface by a magnet. Macri discloses a golf training device in which aids a golfer in perfecting his/her swing (See Background of Invention). The device comprises a trapezoidal arm (14) connected to a spring clip by a magnet (See Entire Document). The magnet cooperates in releasing the trapezoidal arm upon impact from a club (See Column 3, lines 16 through 24). It is noted in Column 3, lines 1 through 15, that the shape of the arms may vary. Macri also discloses that a resilient impact absorbing foam be used to construct the arms to absorb the impact of the club (See Column 2, lines 3 and 4 and lines 61 through 75).

It is admitted prior art that it is known with the art to utilize low-density polyethylene due to its toughness and flexibility. Therefore, one would have found it obvious to employ low-density polyethylene foam in making the elevated path guide means, as taught by the admitted prior art, for the purpose of toughness and flexibility.

3. Claim 18 is rejected under 35 U.S.C. 103(a) as being unpatentable over the prior art as applied to claim 14 above in view of McCormick (USPN 5676604).

The prior art as applied to claim 1 above does not disclose using hook and loop fasteners for securing the elevated path guide means to the cradle interface.

McCormick discloses a golf training device in which two saddles (36) with VELCRO on one side are attached to a swing arm (28) that is attached to club head guide (22) (See Column 2). The VELCRO serves to hold the club head guide (22) in place until dislodged due to contact of a golf club (See Summary of the Invention). One having

Art Unit: 3711

ordinary skill in the art would have found it obvious to use hook and loop fasteners, as taught by McCormick, in order to releasably dislodge the elevated guide means upon impact.

4. Claims 19 and 20 are rejected under 35 U.S.C. 103(a) as being unpatentable over the art as applied to claim 14 above in view of admitted prior art

It is admitted prior art that a V-shaped base configuration is common within art for supporting structures. Therefore, it would have been obvious to one having ordinary skill in the art at the time the invention was made to have a V-shaped base configuration having a juncture being that it is common within the art for supporting structures. It also admitted prior art that is common within the art to place weight on the end of elements to stabilize and further support structures. Therefore, it would have been obvious to one having ordinary skill in the art at the time the invention was made to place weights on the distal ends of the base in order to stabilize the device while in use and to further support the device.

5. Claim 21 are rejected under 35 U.S.C. 103(a) as being unpatentable over The prior art as applied to claim 20 above further in view of Lambert (USPN 3886700).

The prior art as applied to claim 20 above does not disclose having an assembly guide cord to assisting in assembling and disassembling the device. Lambert discloses a collapsible structure comprising a plurality of elongated element attached together by a flexible strand in order to facilitate easy assembly and collapsibility (See Entire Document). One having ordinary skill in the art would have found it obvious to have a guide cord connecting a plurality of member, as taught by Lambert, in order to allow

Art Unit: 3711

easy assembly and collapsibility. The applicant does not disclose why it is critical for the assembly guide cord to be elastic, therefore, would have been an obvious design choice. One having ordinary skill in the art would have found the assembly cord of Lambert to perform equally as well being that the both perform the same function, which is connecting a plurality of members in order to allow easy assembly and collapsibility.

### ***Response to Arguments***

Applicant's arguments with respect to claims 14-21 have been considered but are moot in view of the new ground(s) of rejection.

### ***Conclusion***

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Alvin A. Hunter whose telephone number is 703-306-5693. The examiner can normally be reached on Monday through Friday from 7:30AM to 4:00PM Eastern Time.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Gregory Vidovich, can be reached on 703-308-1513. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.

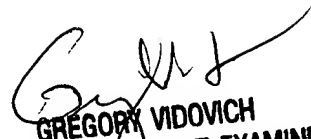

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see <http://pair-direct.uspto.gov>. Should

Art Unit: 3711

you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
